

18 June 2010

PRL Corporation is excited to announce our NEW division acquisition,

Pacific Atlas Engineering

This acquisition will complement and expand our Architectural Metal Division with Precision Machining capabilities.

Pacific Atlas Engineering, (PAE) is a Precision Machine Shop that specializes in high quality contract, general and precision machining. They supplied materials for industries such as Aerospace, Government projects and Door/Window Manufactures. PAE will give PRL the strength and the ability to continue to expand its service capabilities, with its 40 plus machines that includes 4 CNC's. All machinery has been installed in our facility and is ready to service you. These machines specialize in fabricating materials such as Aluminum, Stainless Steel, Brass, Carbon Steel, and Titanium.

This new acquisition will construct PRL to be more versatile. We can now service our customers with superior service and faster lead-time (Metal/Glass Fabrication).

PRL is now able to take on jobs that need precision machining, mechanical assemblies and welding without having to outsource any of the work.

Here are some of the metal fabricating processes capabilities that PAE has brought to PRL,

1. Engineering (Designing part components)
2. Precision Machining
3. Break Metal (columns covers)
4. Forming
5. Punching/Drilling
6. Shearing
7. Welding & Polishing
8. Custom handles/Pull capabilities
9. Die making

PRL will continue to focus on our customer service satisfaction; we will strive to provide our customers with the fastest lead-times, highest quality, and competitive pricing.

Working for you,

David Landeros .

CEO
